ABHISHEK PRABHA

Bengaluru, India | +91-8431080207 | abhiprabha0829@gmail.com | linkedin.com/in/abhishekprabha | github.com/abhiprabha03

PROFESSIONAL SUMMARY

B.Tech Computer Science & Engineering student (REVA University) with hands-on full-stack development experience in React, Node.js, Express.js, MongoDB, Flask, and FastAPI. Built REST APIs, JWT authentication, and database-backed applications across three projects, including a QR code platform and a blockchain-based file integrity monitoring system, and worked on a scikit-learn text-classification app with OCR. Solved 100+ DSA problems on LeetCode; seeking a Software Engineering Intern role.

EDUCATION

B.Tech, Computer Science & Engineering Aug 2023 – Present
REVA University, Bengaluru | Specialization: IoT, Cyber Security & Blockchain | CGPA: 7.5 / 10
Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Web Technologies, Computer Organization

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, Java
Frontend: React.js, Redux, Vite, Tailwind CSS, Canvas API
Backend: Node.js, Express.js, Flask, FastAPI, RESTful API Design, JWT Authentication, MVC Architecture
ML / OCR: scikit-learn, TF-IDF, Logistic Regression, Joblib, Tesseract.js, pytesseract
Databases: MongoDB, MySQL, SQLite, Firebase Firestore
Tools: Git, GitHub, Postman, Docker
Security: SHA-256, GPG (Asymmetric Cryptography), Blockchain Ledger Design

PROJECTS

BlockVerify: Blockchain File Integrity Monitoring System | Python, Flask, React.js, Vite, Tailwind CSS, SQLite, SHA-256, GPG 2025

- Designed a file integrity protocol that stores each file's SHA-256 hash as a block linked to its predecessor, so any tampering breaks the chain and is detected immediately.
- Built a Flask backend with a Risk Engine offering three validation paths (Auto-Mine, Mining Arena, Reject) and chain-link verification on every request; measured end-to-end verification latency under 100 ms.
- Developed a React + Vite audit dashboard for file upload, chain inspection, and security event reporting.
- Implemented GPG signature issuance and verification to produce tamper-evident audit logs.
- Wrote 80+ adversarial test cases (hash collisions, mid-chain block replacement, signature stripping); all were detected.

QR Code Customization Platform | React.js, Node.js, Express.js, MongoDB, Firebase, JWT Oct 2024 – Feb 2025

- Built a configurable QR generation engine supporting custom colors, shapes, logo embedding, and sticker overlays, rendered with the Canvas API and exported as high-resolution PNG.
- Implemented stateless JWT authentication and a RESTful API layer in Express.js.
- Designed the MongoDB schema for scan analytics, storing device type, fingerprint, and geolocation per scan event.

Fake News Detection (Team Project) | React, Vite, FastAPI, Python, scikit-learn, Tesseract.js, Docker GitHub | Live Demo | 2026

- Full-stack web app that classifies news text as REAL or FAKE with a probability score; a React + Vite frontend communicates with a FastAPI REST backend for prediction, health checks, and feedback.
- scikit-learn pipeline (regex text cleaning, TF-IDF unigrams, Logistic Regression) serialized with Joblib; the API loads it at startup and reads a 0.40 REAL-probability threshold from a model metadata JSON file.
- Image input via OCR: Tesseract.js extracts text in the browser and sends it to */api/predict*; the backend also has a pytesseract + Pillow endpoint with image-type and 20-character minimum-text validation.
- Request timeouts, error messages with manual retry, last 5 predictions in browser localStorage, and REAL/FAKE feedback submission; Dockerfile (Python 3.11 + Tesseract), Render config with a health-check route, and Vercel config for the frontend.

EXPERIENCE

Full Stack Developer Intern, Pre-Incubation Program, REVA NEST (University Incubator) Nov 2024 – Present

- Developed the QR Code SaaS platform end to end (React, Express.js, MongoDB), from data model and authentication to API design and deployment.
- Built a scan analytics pipeline and React dashboard tracking per-device and geolocation data, used by 50+ beta users.
- Reduced perceived load time by ~30% by optimizing the Canvas rendering pipeline and applying lazy loading and code splitting in React.

LEADERSHIP

Tech Coordinator, FACE Club, REVA University Nov 2023 – Aug 2024

- Managed technical execution for 10+ events (workshops, hackathons, tech talks), including live demos and tooling.
- Mentored 20+ junior members on full-stack fundamentals.

ACHIEVEMENTS & CERTIFICATIONS

- Solved 100+ DSA problems on LeetCode (arrays, strings, graphs, trees).
- Competed in 4+ college-level hackathons, building and demoing working prototypes within 24–48 hours.
- Certifications: Fundamentals of Cryptography (Infosys Springboard); Agile & DevOps Overview (Infosys Springboard).
